What's New in the?

Ondeso SystemInfo is a small application that allows you to view detailed information about your system and your network. It saves the helpdesk time to get to essential information about users or computers. The orange tray icon on the taskbar makes it quick and easy to remember access to the system info tool. In case of problems, the help desk instruct the user to be launched from the SI icon tool, and it has - thanks always the same arrangement of the rider - a mental support to guide the user to important information for him. Licensing: GNU GPL 2.0 or later System requirements: Windows 2000, Windows XP, Windows Vista Notes: SystemInfo is based on the SystemInfo-En script by A. Gomez and S. Salabert (see "Credits" for further details). The Ondeso SystemInfo contains new features based on feedback from users and the helpdesk and is available from www.ondeso.comAnd thanks to my family, which give me every support, without which the Ondeso would be nothing.
